

Equivariant Neural Networks - Tutorial Introduction

today

Graph Neural Networks

- Nodes - Atoms
- Edges - Bonds between atoms in the cutoff
- Layer - Number of interactions

$$\mathbf{m}_i^{t+1} = \sum_{j \in \mathcal{N}(i)} M_t(\mathbf{h}_i^t, \mathbf{h}_j^t, \mathbf{e}_{ij})$$

$$\mathbf{h}_i^{t+1} = U_t(\mathbf{h}_i^t, \mathbf{m}_i^{t+1})$$

S. Batzner, E(3)-equivariant graph neural networks for data-efficient and accurate interatomic potentials, Nature Communications 13(2453), 2022

A. Musaelian, Learning local equivariant representations for large-scale atomistic dynamics, Nat Commun 14, 579 (2023).

Invariant vs Equivariant

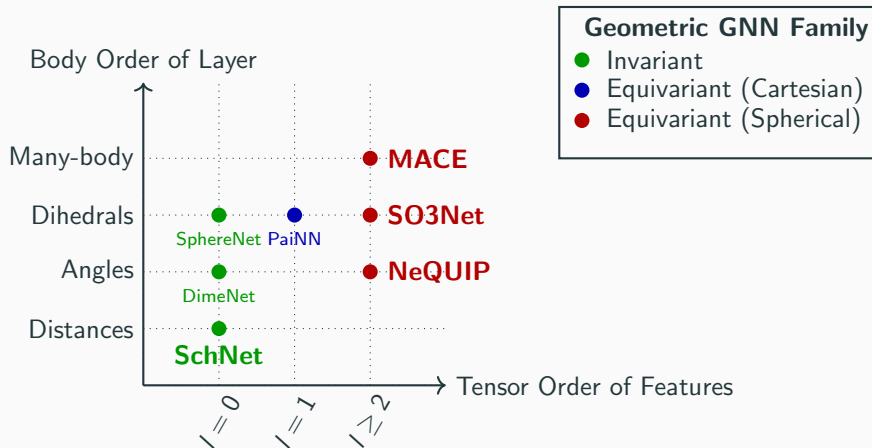

Invariant

$$f(D_X[g]x) = f(x)$$

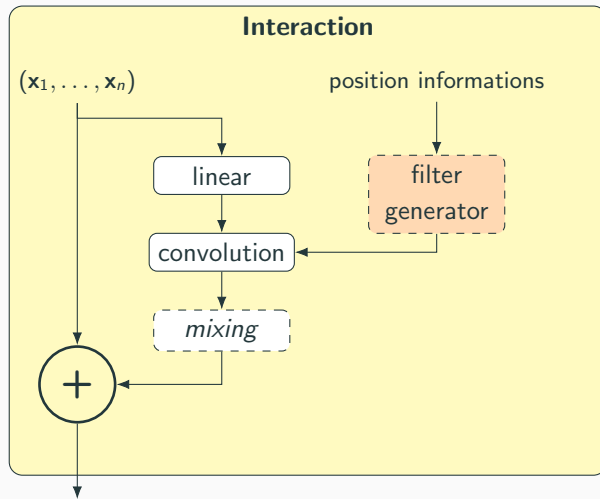

Equivariant

$$f(D_X[g]x) = D_Y[g]f(x)$$

Invariant vs Equivariant

Model Schemes

Convolution Filter

Invariant

$$S(\mathbf{r}) = R(r_{ij})$$

Radial function $R(r_{ij})$

- MLP of radial functions j

$$R(r_{ij}) = \text{MLP}(\{j\})$$

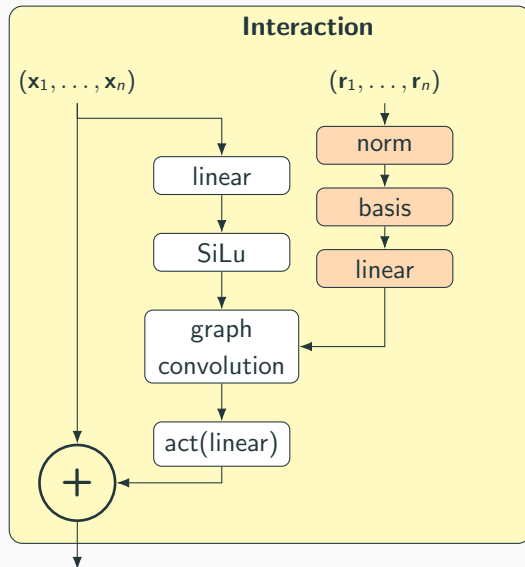

E.g. MACE-MP-0 has 10 Bessel functions and MLP [10, 64, 64, 64, ...]

Equivariant

$$S_m^l(\mathbf{r}) = R(r_{ij}) Y_m^l(\hat{\mathbf{r}}_{ij})$$

From invariant...

SchNet Scheme

Atom embeddings

$$\mathbf{x}_i^0 = \mathbf{a}_{Z_i}$$

Atom embeddings

$$\mathbf{x}_i^0 = \mathbf{a}_{Z_i}$$

Atom-wise layers (a.k.a. linear or self-interaction)

$$\mathbf{y}_i^l = \mathbf{W}^l \mathbf{x}_i^l + \mathbf{b}^l$$

Atom embeddings

$$\mathbf{x}_i^0 = \mathbf{a}_{Z_i}$$

Atom-wise layers (a.k.a. linear or self-interaction)

$$\mathbf{y}_i^l = \mathbf{W}^l \mathbf{x}_i^l + \mathbf{b}^l$$

Interaction blocks

- Atom i get information from j atoms in the cutoff radius
- Propagation of a scalar information
- 2-body, only depends on radial functions
- `cfconv` = continuous-filter convolutional

Atom embeddings

$$\mathbf{x}_i^0 = \mathbf{a}_{Z_i}$$

Atom-wise layers (a.k.a. linear or self-interaction)

$$\mathbf{y}_i^l = \mathbf{W}^l \mathbf{x}_i^l + \mathbf{b}^l$$

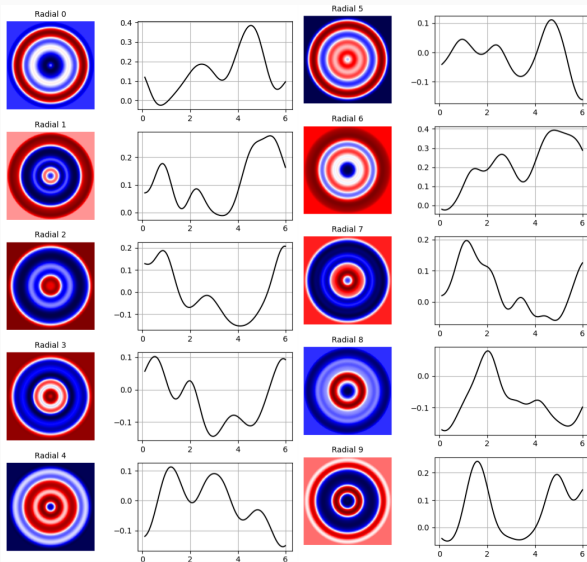

Interaction blocks

- Element-wise multiplication between scalar features and a filter \mathbf{R}

$$\mathbf{x}_{\mathbf{C}_i}^t = \sum_{j=0}^{n_{\text{atoms}}} \mathbf{x}_j^t \circ \mathbf{R}^t(\mathbf{r}_j - \mathbf{r}_i)$$

Readout for the atom-site energy is atom-wise mixing nn.linear to get 1

SchNet - Filter Generation

...to equivariant

Equivariant Feature Vectors

"The feature vectors are geometric objects that comprise a direct sum of irreducible representations of the $O(3)$ symmetry group."

$$\underbrace{128 \times 0e}_{\text{scalar}} + \overbrace{128 \times 1o}^{\text{vector}} + \underbrace{128 \times 2e}_{\text{tensor}} + \dots$$

- e (even) and o (odd) - parity
- e1 - pseudovectors (e.g. normal of the plane)

Symbols

- ℓ - order of features (max num after parity symbol) (in MACE L_{MAX})
- l - order of spherical harmonics in the filter (in MACE ℓ)

Implemented via python `e3nn` library

Equivariant Feature Vectors

Equivariant Feature Vectors

Transformation of $1 \times 0e + 1 \times 1o + 1 \times 2e$

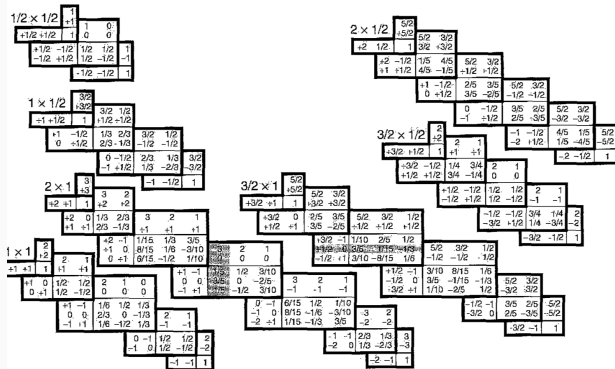

Tensor Product

$$(\mathbf{x} \otimes \mathbf{y})_{\ell_{\text{out}}, m_{\text{out}}} = \sum_{m_1, m_2} \begin{pmatrix} \ell_1 & \ell_2 & \ell_{\text{out}} \\ m_1 & m_2 & m_{\text{out}} \end{pmatrix} \mathbf{x}_{\ell_1, m_1} \mathbf{y}_{\ell_2, m_2}$$

Tensor Product

$$(\mathbf{x} \otimes \mathbf{y})_{l_{\text{out}}, m_{\text{out}}} = \sum_{m_1, m_2} \begin{pmatrix} l_1 & l_2 & l_{\text{out}} \\ m_1 & m_2 & m_{\text{out}} \end{pmatrix} \mathbf{x}_{l_1, m_1} \mathbf{y}_{l_2, m_2}$$

Tensor Product

$$(\mathbf{x} \otimes \mathbf{y})_{\ell_{\text{out}}, m_{\text{out}}} = \sum_{m_1, m_2} \begin{pmatrix} \ell_1 & \ell_2 & \ell_{\text{out}} \\ m_1 & m_2 & m_{\text{out}} \end{pmatrix} \mathbf{x}_{\ell_1, m_1} \mathbf{y}_{\ell_2, m_2}$$

Output features: $|\ell_1 - \ell_2| \leq \ell_{\text{out}} \leq \ell_1 + \ell_2$

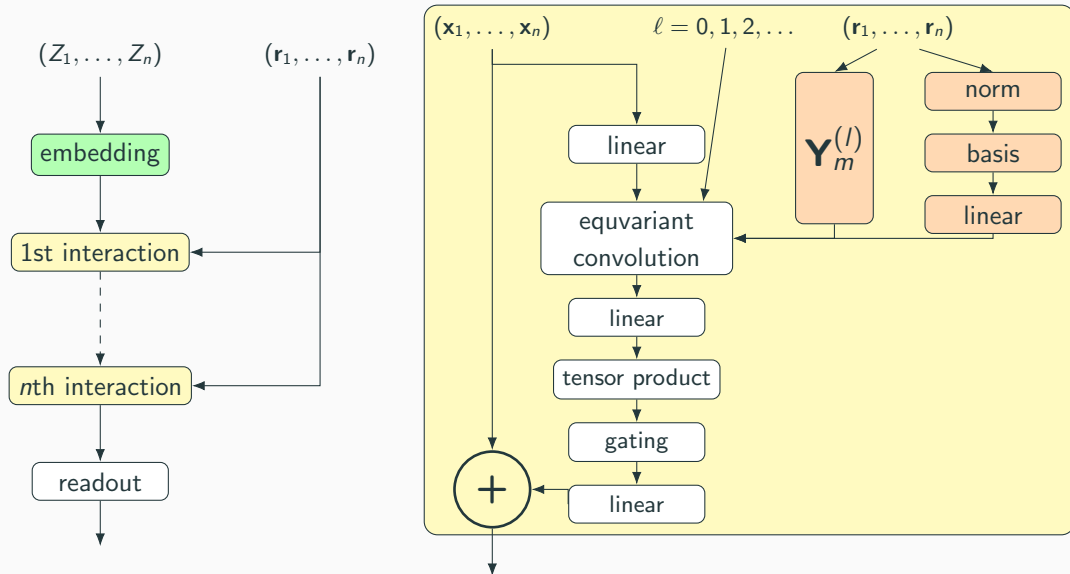

Tensor Product

$$(\mathbf{x} \otimes \mathbf{y})_{\ell_{\text{out}}, m_{\text{out}}} = \sum_{m_1, m_2} \begin{pmatrix} \ell_1 & \ell_2 & \ell_{\text{out}} \\ m_1 & m_2 & m_{\text{out}} \end{pmatrix} \mathbf{x}_{\ell_1, m_1} \mathbf{y}_{\ell_2, m_2}$$

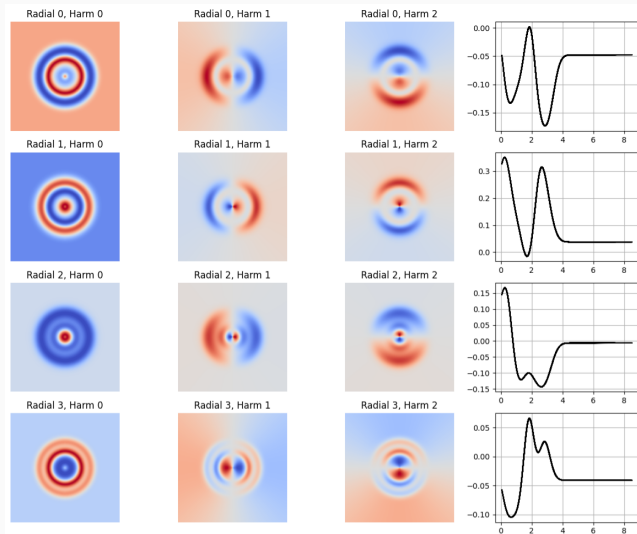

Output features: $|\ell_1 - \ell_2| \leq \ell_{\text{out}} \leq \ell_1 + \ell_2$

SO3Net Scheme

SO3Net - Filter Generation

Atom embeddings

- Embedding is via scalars

$$\mathbf{x}_i^0 = \mathbf{a}_{Z_i}$$

- Has to be expanded with 0s non-scalars

Atom embeddings

- Embedding is via scalars

$$\mathbf{x}_i^0 = \mathbf{a}_{Z_i}$$

- Has to be expanded with 0s non-scalars

Atom-wise layers

$$\mathbf{y}_{i,(lm),f}^t = \sum_{ff'} \mathbf{W}_{ff'} \mathbf{h}_{i,(lm),f'}^t$$

SO3 convolution (msg creation)

$$\mathbf{h}_{i(\ell m)f}^t = \sum_{j \in \mathcal{N}_{\text{at}}[i]} \sum_{\ell_1 m_1} \sum_{\ell_2 m_2} \mathbf{x}_{j(\ell_1 m_1)f}^t \mathbf{R}_{\ell_2 f}^t(r_{ij}) \mathbf{Y}_{\ell_2, m_2}(\hat{\mathbf{r}}_{ij}) \mathbf{C}_{\ell_1 m_1 \ell_2 m_2}^{\ell m}$$

Atom embeddings

- Embedding is via scalars

$$\mathbf{x}_i^0 = \mathbf{a}_{Z_i}$$

- Has to be expanded with 0s non-scalars

Atom-wise layers

$$\mathbf{y}_{i,(lm),f}^t = \sum_{ff'} \mathbf{W}_{ff'} \mathbf{h}_{i,(lm),f'}^t$$

SO3 convolution (msg creation)

$$\mathbf{h}_{i(\ell m)f}^t = \sum_{j \in \mathcal{N}_{\text{at}}[i]} \sum_{\ell_1 m_1} \sum_{\ell_2 m_2} \mathbf{x}_{j(\ell_1 m_1)f}^t \mathbf{R}_{\ell_2 f}^t(r_{ij}) \mathbf{Y}_{\ell_2, m_2}(\hat{\mathbf{r}}_{ij}) \mathbf{C}_{\ell_1 m_1 \ell_2 m_2}^{\ell m}$$

Atom-wise layers

$$\mathbf{y}_{i,(lm),f}^t = \sum_{ff'} \mathbf{w}_{ff'} \mathbf{h}_{i(lm)f'}^t$$

Update

$$\mathbf{x}_{i(\ell m)f}^{t+1} = \mathbf{x}_{i(\ell m)f}^t + \sum_{\ell_1 m_1} \sum_{\ell_2 m_2} \mathbf{x}_{i(\ell_1 m_1)f}^t \mathbf{y}_{i(\ell_2 m_2)f}^t C_{\ell_1 m_1 \ell_2 m_2}^{\ell m}$$

Conventional NN: Activation Functions

Activations can only be applied to scalar features!

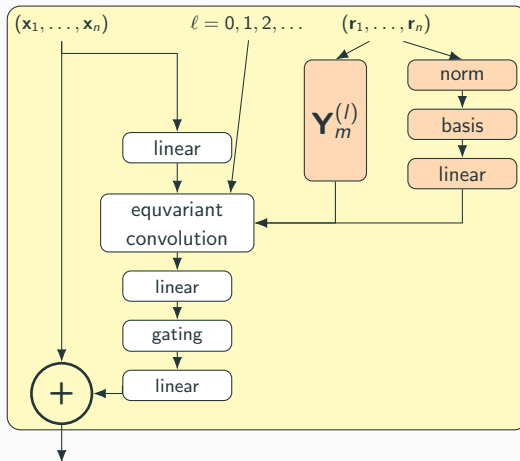

Equivariant NN: Gating Mechanisms

$$\mathbf{y} = \underbrace{\left(\bigoplus_i \sigma_1(x_{l=0,i}) \right)}_{\text{Activation of scalar features}} \oplus \underbrace{\left(\bigoplus_j \sigma_2(g_{l=0,j}) x_{l \neq 0,j} \right)}_{\text{Gating of non-scalar features}}$$

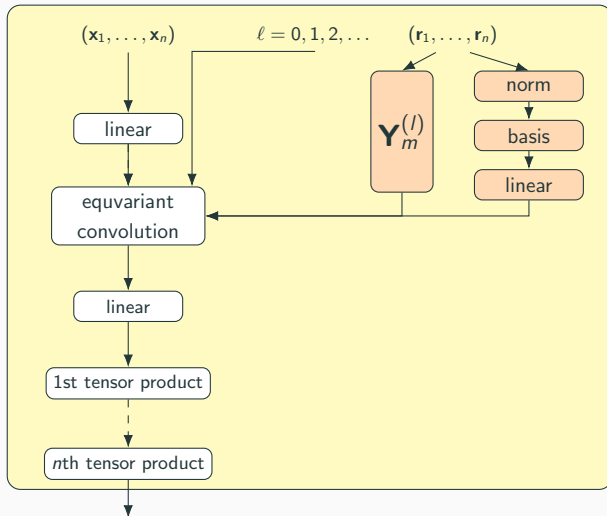

$g_{l=0,j} \longrightarrow$ Additional scalar gating features that activate all features of the same *irrep*, simultaneously and equally!

Non-scalar features can be activated using additional scalar features!

- Bessels functions instead of Gaussians

MACE

Install for tomorrow:

- ASE
- torch
- e3nn
- mace-torch (from pip install is enough)
- torch-scatter see url

Workshop github:
